

## Akbank Turkish Equity Fund

Turkish Equity Fund invests in equities of Turkish companies which are listed on Borsa Istanbul (BIST). The managers identify the fund's investment universe based on liquidity, corporate governance and valuation. We believe the Turkish market is under-researched and so offers numerous opportunities to exploit market inefficiencies. The focus of the fund is based on bottom-up stock selection which also takes account of the macro economy and the viability of current sectors trends in portfolio construction. The active top-down / bottom-up investment process used by the team is designed to capture opportunities across all market capitalisations while respecting rigorous risk controls.

### Market Overview

In May, BIST 100 Index dropped by a painful 11% in Euro basis due to both internal and external factors. At home, the market was rattled due to the reshuffling of key government executives including the Prime Minister. In fact, Prime Minister Davutoglu was unexpectedly replaced by Binali Yıldırım. Investors were somewhat relieved to see Mehmet Şimşek retain his position. Aside from these domestic factors, Turkey faced strong global headwinds as EM currencies faced a general sell – off. Equity and fixed income markets of EM countries experienced meaningful outflows in May. In this backdrop, foreign investors sold over \$800 million worth of equities in Turkey. We had trimmed our equity positions considerably in April, so we used the general sell – off that took place in May as a buying opportunity. We ended the month with an equity weight close to our benchmark. We expect the markets to stabilize after an extraordinarily volatile period.
